

Strong quarter with further potential

- Sales beat despite lower production than expected
- Double-digit growth set to continue
- Extra dividend due to excess capital

Engine equivalents increase of 18%

Q4 sales came in at SEK 24.6m (ABGSCe SEK 23.1m), 38% growth y-o-y, and EBIT of SEK 7.5m (ABGSCe SEK 6.9m) with an EBIT margin of 30%. Sales came in SEK 1.5m stronger than expected due to series production and equipment each adding SEK 0.7m. Production averaged 2.60m engine equivalents during the quarter (ABGSCe 2.75m) and grew 18% y-o-y. Sampling cups delivered came in at 53,800 (ABGSCe 51,500). Despite the deviation in produced engine equivalents, sales grew primarily due to a higher selling price than expected. The offset in the quarter is expected to come back in 2019. Equipment installations were higher due to two installations taking place in the quarter (ABGSCe one). Opex was in line with expectations despite a nonconformity claim, which is expected to be less than SEK 0.9m.

Full Ram production in Q1

Sintercast announced that production of Ram super duty pickups have started, but did not fully contribute to Q4, and that installation activity is high in other geographic areas and segments, such as China and heavy trucks. We saw strong growth in the heavy truck segment, which we believe will keep growing due to the market outlook and Sintercast's position. We have raised sales by 4% and EBIT by 2-3% for the period '19e-'20e, due to slight price adjustments within serial production. This implies a '18-'21e sales CAGR of 12% and EBIT CAGR of 20%.

Dividend story in the making

Sintercast is currently trading at an EV/EBIT of 18.9x and a FCF yield of 4.6%. The board has proposed an ordinary dividend of SEK 3.50/share (2.75) and an extra dividend of SEK 1.50/share – totalling SEK 5.0/share, exceeding our expectation of a total dividend of SEK 4.75/share. We find this positive due to its cash flow generation, current net cash position and limited investment needs.

Opportunities

Increased focus on higher energy efficiency and lighter diesel engines. Increasing average vehicle size. Higher penetration of the truck and commercial vehicle segments.

Risks

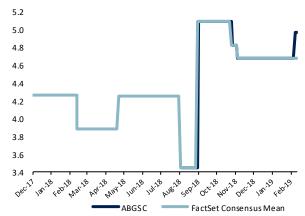

Automotive demand, and more specifically demand for larger passenger vehicles such as SUVs and pick-up trucks with diesel engines. Regulation relating to fossil fuels and diesel in particular poses risks to the business model

Company description

SinterCast is a leading supplier of online process control technology and know-how for the reliable high-volume production of Compacted Graphite Iron (CGI). The material is stronger than traditional iron, which enables downsizing, increased thermal and mechanical loading, and increased engine performance. The technology is primarily used in diesel engines for larger passenger vehicles such as SUVs and pick-ups as well as commercial vehicles and offroad equipment.

Market leading and highly integrated in production creates high barriers to entry

The Sintercast process reduces costs and improve quality control

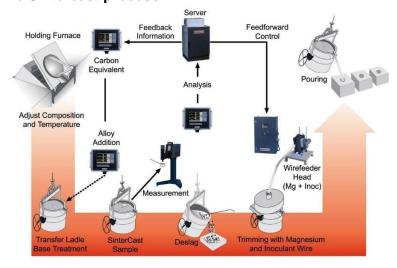

The company

Sintercast is a market leading supplier of process control technology for production of CGI (Compact Graphite Iron), which is a form of cast iron. The material offers at least 75% higher tensile strength, 45% higher stiffness and approximately double fatigue of grey iron and aluminium. These characteristics makes it ideal for engine production and it is primarily used to produce engine blocks for passenger vehicles and commercial vehicles. This allows improved performance and durability of the engine as well as lower fuel consumption meanwhile reducing its size. This is not just beneficial for the end customer but also the manufacturer due to reduction in material costs (less iron) as well as lower energy usage - reducing total costs even after Sintercast fees have been paid. Sintercast has over 50 installations in 14 countries worldwide in foundries with end customers such as Ford, Ram, Scania and MAN. Typically the total cost of Sintercasts product totals 1-2% of the total production costs for the engine. The company is deeply embedded in its customer's production which creates high barriers to entry - once the Sintercast process technology is implemented it is hard to remove or replace. Sintercast's biggest customer is Tupy, which accounts for more than 50% of group sales, a figure that has grown over the years, illustrating Sintercast's ability to gain additional contracts with its current customers.

The Sintercast process

The Sintercast process allows the foundry to control the quality of each cast, which is crucial since engines are expected to live for a long time as well as not breaking or losing capacity. When the cast is poured in to the casket, a Sintercast sample cup is filled up with the current CGI cask and the Sintercast thermometer in the sample cup measures the current properties of the CGI. It will then send data to the system 3000 who interprets the data and determine if the cask's properties are good enough. If it is good, then the casting process can proceed. If it is bad, a wirefeeder can add magnesium in order to get the right properties — then the process can proceed without having to discard the cast. It is also important to be able to track the specific casks under production to know where it has been and what properties it had. Therefore Sintercast have developed its own Ladle tracking system with RFID making it possible to track the cast while in production and if an error is detected by the system 3000, the production will be shut down immediately so production won't proceed and causing harm to other casts. This makes it possible to track and backlog the right cast and its properties even years after it have left factory.

The Sintercast process

Source: Sintercast

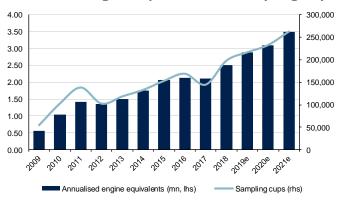

Sintercast's business model offers scalability as installed hardware base increases

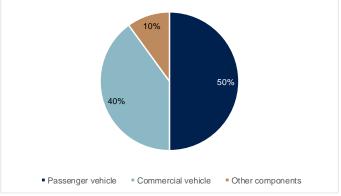

The business model

Sintercast sells or leases their system 3000 that are installed at the foundry accompanied with an annually leased process control software that is required to use the system 3000. Software licence is paid annually and a licence fee for the right to use the software and leased systems are one average leased for 7 years. In addition sampling cups are sold, which are non-reusable and required for every casting, along with a thermometer that is reusable up to 250 times. Sintercast is also paid a running production fee for each tonne of CGI casting with typical running fee of 40-50 euro. The system 3000 is fundamental in order to control the process and collect and interpret data. The system can be configured to suit the layout or process flow of any foundry, making it possible to install anywhere. It is also possible to add different modules such as wirefeeders and sampling module to increase capacity. As the installed hardware system base grows other revenue streams will also increase, such as software licence, sampling cups and running production fee per tonne of cast.

One important contributor of Sintercast's sales growth are increased production volumes in existing programmes at current customers, but the main contributor is adding new high volume programs. Sintercast have successfully done this the last years, producing bestselling engines for bestselling cars - as the Ford F-series and now the new Ram 6.7 litre inline diesel engine.

Annualised engine equivalents & sampling cups Revenue split divided in to sectors

Source: ABG Sundal Collier, company data

Source: ABG Sundal Collier, company data

The market & diesel outlook

Sintercast's main market is commercial vehicles such as trucks, and passenger vehicles in the upper segment such as SUVs, Vans and Pickup trucks. Since CGI engines improve fuel efficiency and reduce weight, bigger cars benefit the more from these advantages. Especially since these cars, besides from volume weight, often have many extra features compared to a small car – therefore it's important to reduce weight meanwhile having a strong engine, which CGI engines makes possible. According to a survey made by Citi, diesel penetration in medium and smaller cars will see a decline of 20-25% by 2025. Meanwhile, the upper segment will remain relatively unchanged. Furthermore, the trend is that cars are getting bigger on average, further increasing potential for Sintercast in the segment.

Sintercast's main customers are foundries who implement the technology in their casting process. The biggest customer is Tupy who has foundries in the Americas, accounting for more than 50% of sales. Tupy manufactures engines for end customer such as Ford and Ram. Sintercast is also growing its customer base in China and Russia who are potential growth markets in addition to the growing segment of industrial power.

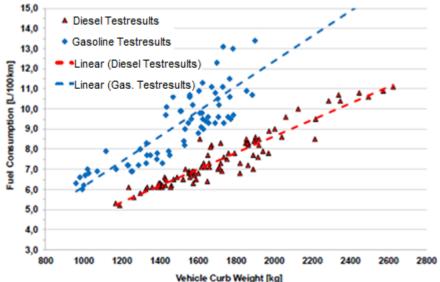

Main segments to keep growing

Heavy vehicles benefit more from diesel engines than smaller cars do

Diesel contains more energy than petrol and diesel engines have a higher thermodynamic efficiency, which makes diesel engines 20-30% more efficient in total. This impact gets bigger as the curb weight of the car increases as the fuel consumption increases less for a diesel engine compared to petrol engine as the cars weight get bigger. The impact is biggest for heavier cars and that segments is where Sintercast operates. Therefore the future of diesel engines within the segment is more stable than petrol. In the smaller cars segment the future is much more uncertain and the segment is expected to shrink its diesel penetration.

The trend is that more companies introduce CGI engines in their new models. This is due to them being more efficient and they would often meet future CO2 emission-rules. For instance, the world most popular pickup truck Ford F-series produce its engines with Sintercast technology, prior only offering a petrol engine but last year they started producing a CGI Sintercast diesel engine, reducing fuel consumption further as well as increasing torch.

Diesel fuel consumption more effective as weight increases

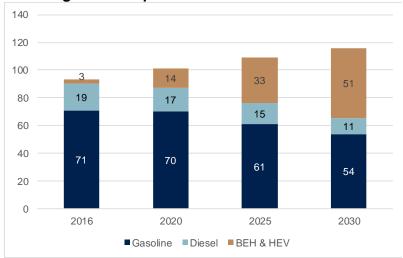

Source: Sintercast (data from AVL)

Electrification to be seen as a possibility rather than obstacle

The electric vehicle trend is clear and its market share is growing rapidly, albeit from small levels. In 2016, according to ISM, only 3 million of total new production were electrified cars or hybrids compared to diesel of 19 million. This might sound like bad news for combustion engines, but it could be seen as an opportunity as the biggest growing segment is hybrids where an electric and combustion engine are combined – meaning that casting of small and strong engines will still take place, even in a greater extent. As stated earlier, CGI offers the opportunity to cast small, strong, and efficient and durable engines, making it ideal for hybrids.

Global light vehicle production

A selection of Sintercast's process implementations

Sintercast's technology is currently used in 17 different commercial vehicle engines, and more than 50 passenger vehicles in 18 car brands. The technology is also implemented in the production of America's most popular engine in America's most popular pickup truck. The Engine is a 2.7 litre V6 gas engine and Ford announced in 2018 that it will start producing a diesel engine in CGI. Also, Ram announced in January the sale of the popular Super duty pickup-trucks with the popular 6.7 litre engine from Cummins in CGI. This installation will add about 300,000 engine equivalents per year implying serial production revenue of around SEK 9-10m.

Record Scania investment - 90,000 tonne CGI foundry

In January 2019, Scania announced that it will build a new CGI foundry starting in 2020, where production of CGI engines will take place. The building received permission to produce 90,000 tonnes per year. The full production of engines will start in 3-5 years after installation, which really cements the belief of efficient CGI diesel engines in the future. The Sintercast engine will become standard for Scania and MAN trucks. This is expected to boost Sintercast serial production sales by SEK 20m per year (> 20% increase given current revenue). This increases the confidence of our estimates as well as de-risking Sintercast future operations.

Dividend story in the making

Sintercast proposed a total dividend of SEK 5/share (SEK 35m) for 2018, of which the ordinary dividend equalled SEK 3.5/share, with an extra dividend of SEK 1.5/share. This equals an EPS payout ratio of 108% and an FCF payout ratio of 160%. This may not sound sustainable, but we find this positive given Sintercast's financial position with limited investment needs (<10% of operating cash flow) and its SEK 30m net cash position in addition to zero interest bearing debt. Going forward, we expect Sintercast to pay out ~100% of its FCF and EPS (implying a total DPS of SEK 5.5-7.0 for the period '19e-'21e), in order to not keep growing its large cash position. Furthermore, this should keep the cash position relatively stable at current levels, suggesting that there could be further room for higher dividends if the company believes its cash position is too large to employ. We expect dividend yields of 5.5-7.0% and FCF yields of 4.6-6.7% for the period '19e-'21e. To summarise, we assume that the total distribution to shareholders during '19e-'21e will amount to SEK 132m, corresponding to 19% of today's Mcap. of SEK 709m.

Analyst certification

I/We, Karl Bokvist, Mattias Ehrenborg, the author(s) of this report, certify that not withstanding the existence of any such potential conflicts of interests referred to below, the views expressed in this report accurately reflect my/our personal view about the companies and securities covered in this report.

Analyst valuation methods

ABG Sundal Collier analysts may publish valuation ranges for stocks covered under Company Sponsored Research. These valuation ranges rely on various valuation methods. One of the most frequently used methods is the valuation of a company by calculation of that company's discounted cash flow (DCF). Another valuation method is the analysis of a company's return on capital employed relative to its cost of capital. Finally, the analysts may analyse various valuation multiples (e.g. the P/E multiples and the EV/EBITDA multiples) relative to global industry peers. In special cases, particularly for property companies and investment companies, the ratio of price to net asset value is considered. Valuation ranges may be changed when earnings and cash flow forecasts are changed. They may also be changed when the underlying value of a company's assets changes (in the cases of investment companies, property companies or insurance companies) or when factors impacting the required rate of return change.

Important Company Specific Disclosure

The following disclosures relate to the relationship between ABG Sundal Collier and its affiliates and the companies covered by ABG Sundal Collier referred to in this research report.

Unless disclosed in this section, ABG Sundal Collier has no required regulatory disclosures to make in relation to an ownership position for the analyst(s) and members of the analyst's household, ownership by ABG Sundal Collier, ownership in ABG Sundal Collier by the company(ies) to whom the report(s) refer(s) to, market making, managed or co-managed public offerings, compensation for provision of certain services, directorship of the analyst, or a member of the analyst's household, or in relation to any contractual obligations to the issuance of this research report.

ABG Sundal Collier has undertaken a contractual obligation to issue this report and receives predetermined compensation from the company covered in this report.

ABG Sundal Collier is not aware of any other actual, material conflicts of interest of the analyst or ABG Sundal Collier of which the analyst knows or has reason to know at the time of the publication of this report.

Production of report: 25/02/2019 17:25 CET.

All prices are as of market close on 22 February, 2019 unless otherwise noted.

Disclaimer

This document has been prepared by ABG Sundal Collier which is the marketing name referring to all or any of ABG Sundal Collier ASA, ABG Sundal Collier AB or ABG Sundal Collier Partners LLP and any of their affiliated or associated companies and their directors, officers, representatives and employees.

This research product is commissioned and paid for by the company covered in this report. As such, this report is deemed to constitute an acceptable minor non-monetary benefit (i.e. not investment research) as defined in MiFID II.

This research product has not been prepared in accordance with legal requirements designed to promote the independence of investment research and is not subject to any prohibition on dealing ahead of the dissemination.

This report is provided solely for the information and use of professional investors, who are expected to make their own investment decisions without undue reliance on this report. The information contained herein does not apply to, and should not be relied upon by, retail clients. This report is for distribution only under such circumstances as may be permitted by applicable law. Research reports prepared by ABG Sundal Collier are for information purposes only. ABG Sundal Collier accepts no liability whatsoever for any losses arising from any use of this report or its contents. This report is not to be used or considered as an offer to sell, or a solicitation of an offer to buy. The information herein has been obtained from, and any opinions herein are based upon, sources believed reliable, but ABG Sundal Collier makes no representation as to its accuracy or completeness and it should not be relied upon as such. All opinions and estimates herein reflect the judgment of ABG Sundal Collier on the date of this report and are subject to change without notice. Past performance is not indicative of future results.

This research report does not, and does not attempt to contain everything material that there is to be said about SinterCast.

The compensation of our research analysts is determined exclusively by research management and senior management, but not including investment banking management. Compensation is not based on specific investment banking revenues, however, it is determined from the profitability of the ABG Sundal Collier Group, which includes earnings from investment banking operations and other business. Investors should assume that ABG Sundal Collier is seeking or will seek investment banking or other business relationships with the companies in this report. The research analyst(s) responsible for the preparation of this report may interact with trading desk and sales personnel and other departments for the purpose of gathering, synthesizing and interpreting market information. From time to time, ABG Sundal Collier and its affiliates and any shareholders, directors, officers or employees thereof may (I) have a position in, or otherwise be interested in, any securities directly or indirectly connected to the subject of this report, or (II) perform investment banking or other services for, or solicit investment banking or other services from, a company mentioned in this report. ABG Sundal Collier relies on information barriers to control the flow of information contained in one or more areas of ABG Sundal Collier, into other areas, units, groups or affiliates of ABG Sundal Collier.

Norway: ABG Sundal Collier ASA is regulated by the Financial Supervisory Authority of Norway (Finanstilsynet); Sweden: ABG Sundal Collier AB is regulated by the Swedish Financial Supervisory Authority (Finansinspektionen); UK: This report is a communication made, or approved for communication in the UK, by ABG Sundal Collier Partners LLP, authorised and regulated by the Financial Conduct Authority in the conduct of its business. US: This report is being distributed in the United States in accordance with FINRA Rule 1050(f)(3)(B) by ABG Sundal Collier Inc., a FINRA member which accepts responsibility for its content. Research analysts are not registered/qualified as research analysts with FINRA or the NYSE, and are not associated persons of ABG Sundal Collier Inc. and therefore not subject to FINRA Rule 2241, the research analyst conflict rules. Research reports distributed in the U.S are intended solely for "major institutional investors", as defined under Rule 15a-6 of the Securities Exchange Act of 1934. Each U.S major institutional investor that receives a copy of this research report by its acceptance represents that it agrees it will not distribute this research report to any other person. Any U.S. major institutional investor receiving this report who wishes to effect

transactions in any securities referred to herein should contact ABG Sundal Collier Inc., not its affiliates. Further information on the securities referred to herein may be obtained from ABG Sundal Collier Inc., on request.

Singapore: This report is distributed in Singapore by ABG Sundal Collier Pte Ltd, which is not licensed under the Financial Advisers Act (Chapter 110 of Singapore). In Singapore, this report may only be distributed to institutional investors as defined in Section 4A(1)(c) of the Securities and Futures Act (Chapter 289 of Singapore) ("SFA"), and should not be circulated to any other person in Singapore.

This report may not be reproduced, distributed or published by any recipient for any purpose whatsoever without the prior written express permission of ABG Sundal Collier.

Additional information available upon request. If reference is made in this report to other companies and ABG Sundal Collier provides research coverage for those companies details regarding disclosures may be found on our website www.abgsc.com.
